INTRODUCTION

In the last ten years, there has been a plethora of information published about deafness and hearing loss, and written for, by, or about individuals who are deaf. Recent events, such as the Gallaudet protest for a deaf president, the establishment of state telephone relays, and the growth of sign language classes offered at colleges and universities, have increased public awareness and interest about people who are deaf or hearing impaired.

This bibliography is an attempt to make public librarians more cognizant of the literature related to deafness. It is not intended to be a complete listing of materials in the field of deafness, but rather a "selected bibliography" of the more recent and/or important works.

It is our intent to update this bibliography annually.
